

Introduction

Trading is a very rewarding profession to anyone, but the reality is trading is NOT for everyone. Trading is a skill that needs to be practiced and refined along with self control and having a correct mindset or trading psychology. A typical aspiring trader would usually take 2~5 years of consistent backtesting, strategy refinement, risk management and discipline in order to achieve consistent profitability.

Tradeture can bridge that gap, by automating the strategy, risk management, and fully backtesting the strategy through automation to ensure subscribers will have reliable data of what is the past performance of a strategy to certain trading pairs before they even trade. The only part the aspiring trader / investor has to manage now is his mindset.

Tradeture is a platform that enables automated trading through use of API (Application Programming Interface) that links tradeture-bot to trade on your behalf in your own cryptocurrency exchange of choice by your own trade settings.

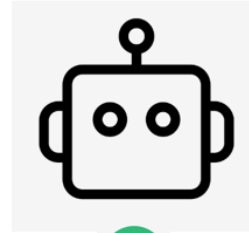

BackTest

Fully Back tested
Strategies

Risk Management

Pure Logic based
Trading

With Tradeture's automated trading, Traders will be able to execute their Trading Plan effectively, no human emotion will be included in the execution of the trades which is one of the main key factor in driving traders to failure.

All strategies in Tradeture are developed and derived from other existing successful strategies in trading, ALL developed strategies at Tradeture have been customized, refined and back tested, to ensure users will have an Edge in the market, increasing their chances of success.

Risk Management is one of main features Tradeture is focused on, it is smart enough to know that if a signal will have higher fees and will affect Risk-Reward-Ratio greatly, it will not proceed with the trade, even if it's a valid signal.

Beginner Friendly

Tradeture has a recommended Trade settings for beginners with little to no knowledge in trading for easy onboarding as well as a wide variety of trading configurations to suit an advanced trader's style.

\$TURE is the Utility token of Tradeture, all services of Tradeture in the future will only be payable via \$TURE, Tradeture main service is a Trading-bot that lets users automate their crypto futures trading.

An Airdrop event will be conducted upon Token Generation Event to reward early subscribers who used tradeture while it was in USDT payment.

Tradeture subscription will be a fixed amount of :

- 10 \$TURE / 24 hour subscription per 500\$ USDT Managed Portfolio Balance

Tradeture will conduct a weekly profit sharing to all subscribers, the details are :

- 5 \$TURE will be directly to Tradeture as sales to sustain operation.
- 2 \$TURE will be equally divided to Tradeture's WINNING subscribers in proportion to their portfolio balance and length of subscription on given time frame
- 2 \$TURE will be equally divided to Tradeture's LOSING subscribers in proportion to their portfolio balance and length of subscription on given time frame
- 1 \$TURE will be burned forever to benefit long term holders and investors.
- FREE plan as Referral with starting balance of 500\$ or more in the given time frame are eligible from \$TURE's Profit sharing
- FREE Plan as Referral with Less 500\$ are **NOT** eligible from \$TURE's Profit sharing
- FREE Plan as Marketers are NOT eligible from \$TURE's Profit sharing

On top of the automated trading that is offered by Tradeture, subscribers will also be incentivised by the Utility token of tradeture in the future upon launch, and as a continued reward for using tradeture services.

Tradeture will allot a portion of it's earnings back to our subscribers as added profit for those who are already in profit and a compensation to subscribers who have lost a portion of their margin in a given timeframe.

Payout of \$TURE Token to subscribers will be weekly, 1st, 8th, 15th, 22nd, day of each month.

Tradeture will call this scheme "Passive-Risk-To-Earn".

Tradeture founders use its own platform and can gain additional profits outside of \$TURE's economy.

Tradeture will not trade account balances > \$20,000, users with large balances must create sub accounts and divide their balance between their sub accounts and trade different pairs in order to avoid any issues in trading size

“Passive-Risk-To-Earn” Model will allow for a part of the Subscriber’s profit through trading in other futures markets to be included in the entire economy of \$TURE.

The demand will come from subscribers needing 10 TURE / 500\$ account balance to continue using Tradeture Services every day.

\$TURE has a burning mechanism so it also makes \$TURE a deflationary token.

The rate of burn will be reliant on the demand of Tradeture services.

Burning of tokens will stop once 50% of the entire supply has been burned, and will be added to Tradeture sales.

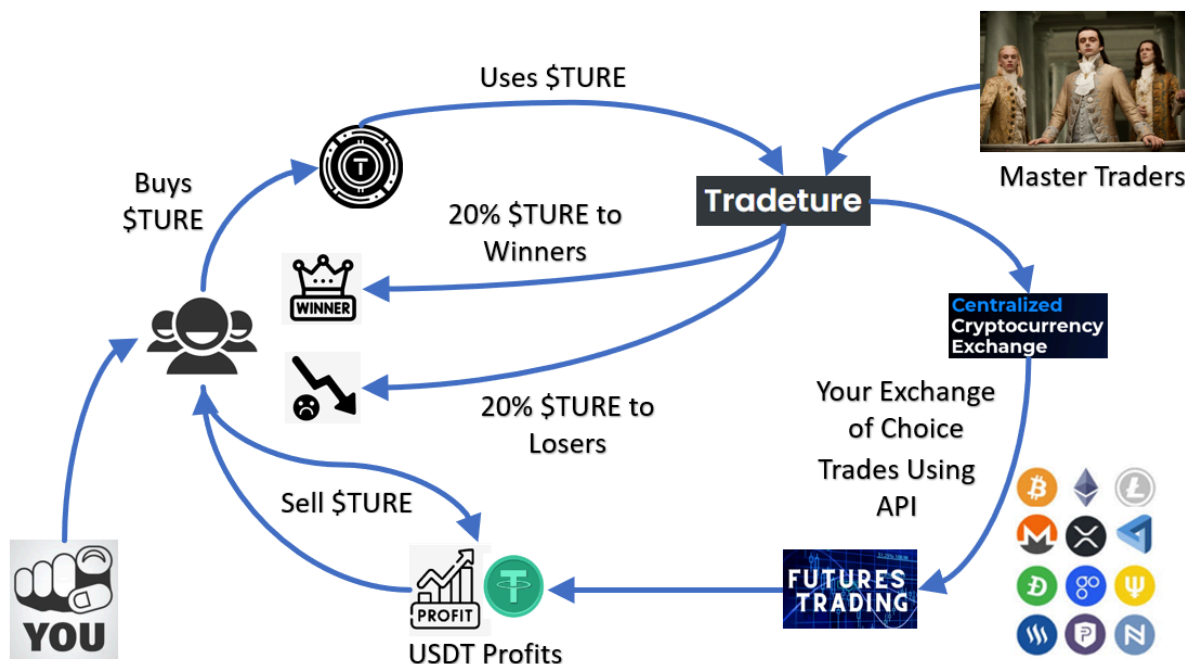

The entire economic scheme allows Tradeture services to be valued by the community.

\$TURE Economic Stability of Passive-Risk-To-Earn

Play-To-Earn mechanism is a great idea to empower people by enabling for them ways to earn money outside conventional methods, however most play-to-earn projects have one major flaw, if the demand for the token or burning mechanism of that token is not enough to counter the supply of reward tokens, that token doom is inevitable.

\$TURE on the other hand is a utility token that is not the main reward token of Tradeture, but the Miscellaneous reward for using Tradeture services. The main reward is USDT and is not from \$TURE’s original economy, because subscribers are trading the other crypto Markets with USDT as profit.

For as long as the subscriber’s are in profit, \$TURE economy will be stable and can even grow overtime as more users onboard.

SIDE Income

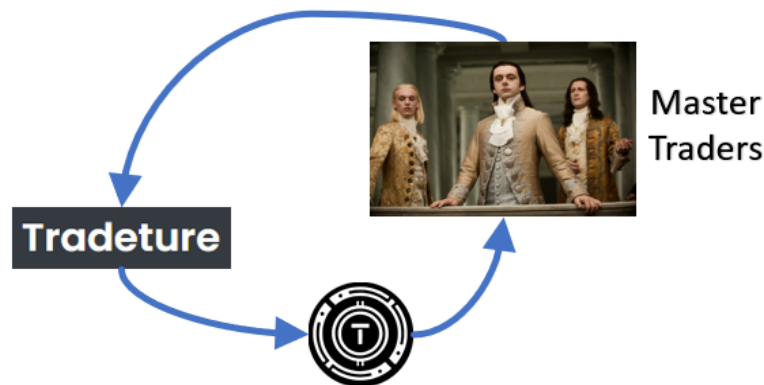

Aside from USDT from trading futures, \$TURE Reward for using Tradeture services, there is one more way to make more money with Tradeture.

Through your exchange's Referral system.

The concept is you will have your friends sign-up under your referral, so you can gain a portion of their fees and if those fees are higher than \$TURE subscription fees for both your accounts you will earn a Net profit in USDT depending on your friends trading volume.

Even if it's not enough to cover for both your \$TURE Subscription fees it will certainly offset a portion of the cost, it's like another discount to Tradeture services, it's so much better than paying 100%.

PS. Do not Multi Account, I may not ban you but your exchange definitely will.. Only do this if you have real friends, if you don't, I hope you can make some inside Tradeture Community.

Master Traders Strategy Sharing

Tradeture is also for those who are already successful in their Trading Ventures.

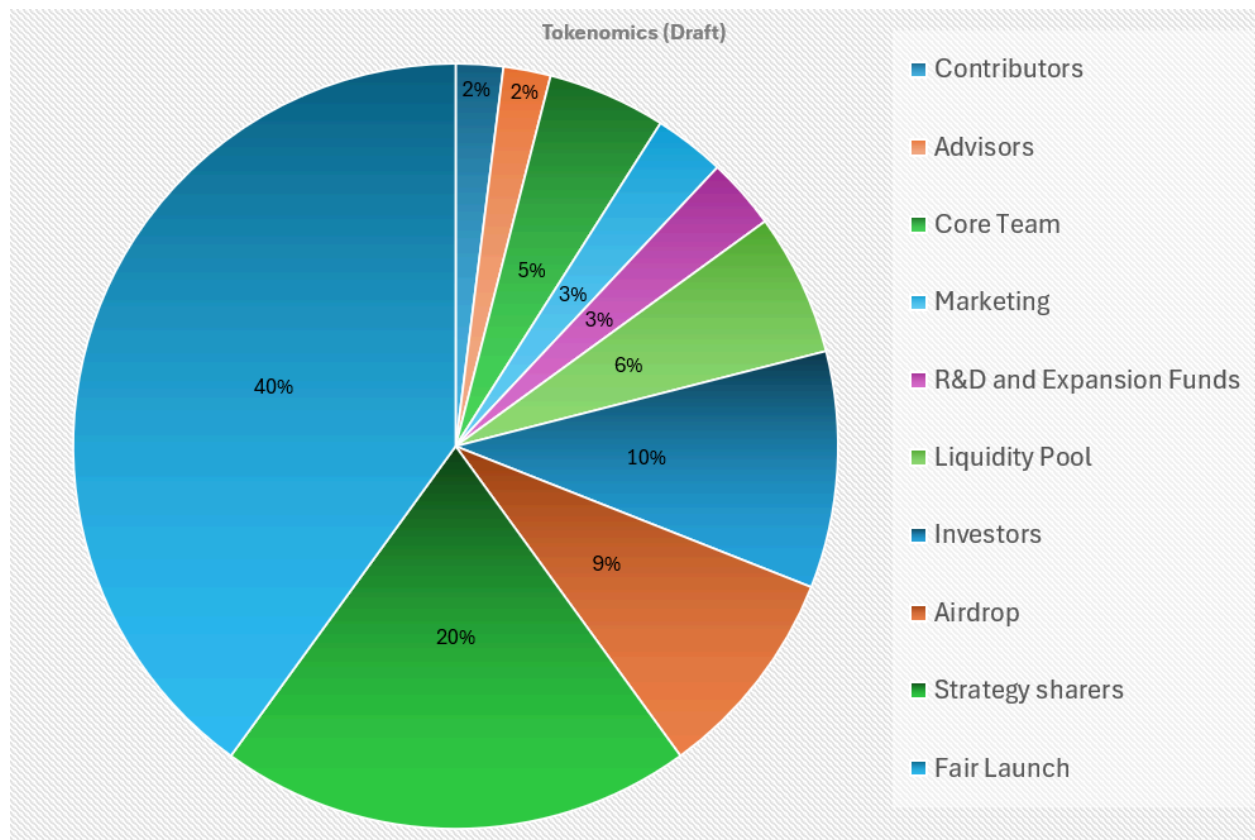

Tradeture will offer Master Traders who will share their profitable strategy with 0.1% of the Total supply of \$TURE token unlocked and 0.1% of the total supply vested for 1 year. Total of 0.2% of the total supply of \$TURE token, plus a LIFETIME free access to his own strategy, once live.

The strategy once programmed must run through Backtesting of 2% risk per trade, and be profitable for at least 35% of the overall Trading pairs, and make a profit of at least 150% for the highest profitable pair.

Tradeture is aiming to have 100 master trader's strategies for the public to use. That is 20% of the overall supply of \$TURE token dedicated to Master Traders who will share their strategy.

Tokenomics Draft

Allocation May change in the future

Tradeture isn't just about a Plan on a white paper.

Tradeture is Live and has two Backtested strategies ready for use, early subscribers while in USDT payment will be eligible for Airdrop as early investors.

Free plan subscribers are also eligible for airdrop.

Subscribers can already earn USDT trading market in the current phase of the project.

Please do not attempt a Multi-Account airdrop farming, your exchange will definitely ban you and may freeze your funds. Tradeture will not be liable to any inconvenience that may cause you.

Each user will have their own referral links.

Allocation will be announced in the future.

A portion of the USDT payments in the current phase will be used as starting liquidity for \$TURE Token.
